

Strabismus and Amblyopia

เกณฑ์มาตรฐานแพทยศาสตร์ 2555 ข้อ 2.3.7.1 เรื่อง

Disorders of ocular muscles (strabismus, amblyopia)

Prapatsorn Patikulsila, M.D.

April, 2023 (copyright)

Resource (Flipped Classroom) (COVID-19 era year 4)

Objectives

- สามารถวัด VA ในเด็กวัยต่าง ๆ ได้ถูกต้อง
- รู้และเข้าใจการวิภาวด และสรีรวิทยาของกล้ามเนื้อตา (prerequisite)
- ทราบนิยาม และลักษณะของตาเบชนิดต่าง ๆ
- สามารถตรวจตาเข้าได้ด้วยวิธี Hirschberg test, cover test
- สามารถแนะนำผู้ป่วย ผู้ปกครอง และส่งต่อผู้ป่วยตาเข้าในเวลาที่เหมาะสม
- บรรยายภาวะ amblyopia ชนิดต่าง ๆ ได้ถูกต้อง

Contents

- Tests for VA
- Strabismus
- Amblyopia

Tests for VA

- Fixation target test :
 - fix and follow
- Allen card
- LEA chart
- E-symbol
- Snellen chart

Fixation target test

OD fix and follow

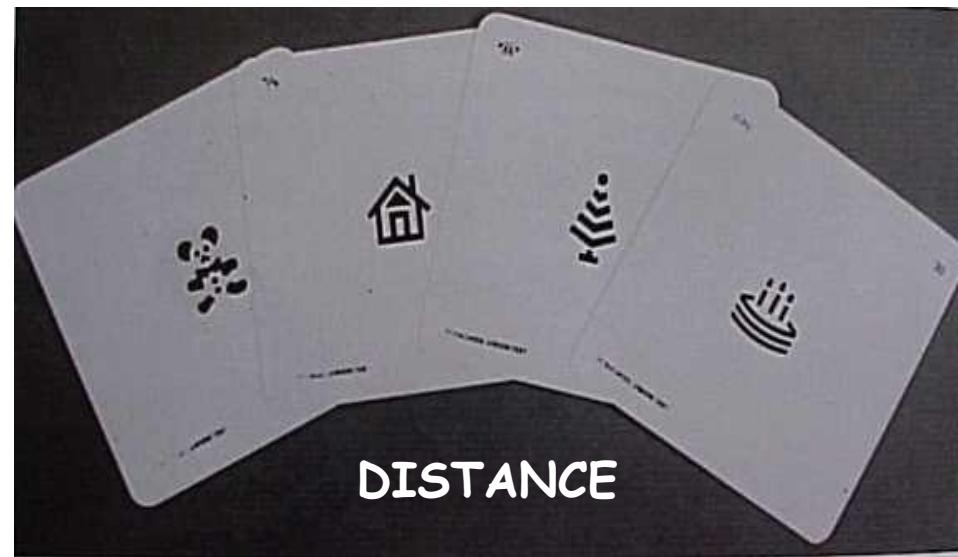

OS fix and follow

CHILDS RECOGNITION AND
NEAR POINT TEST
TEST DISTANCE 13 INCHES

Allen card

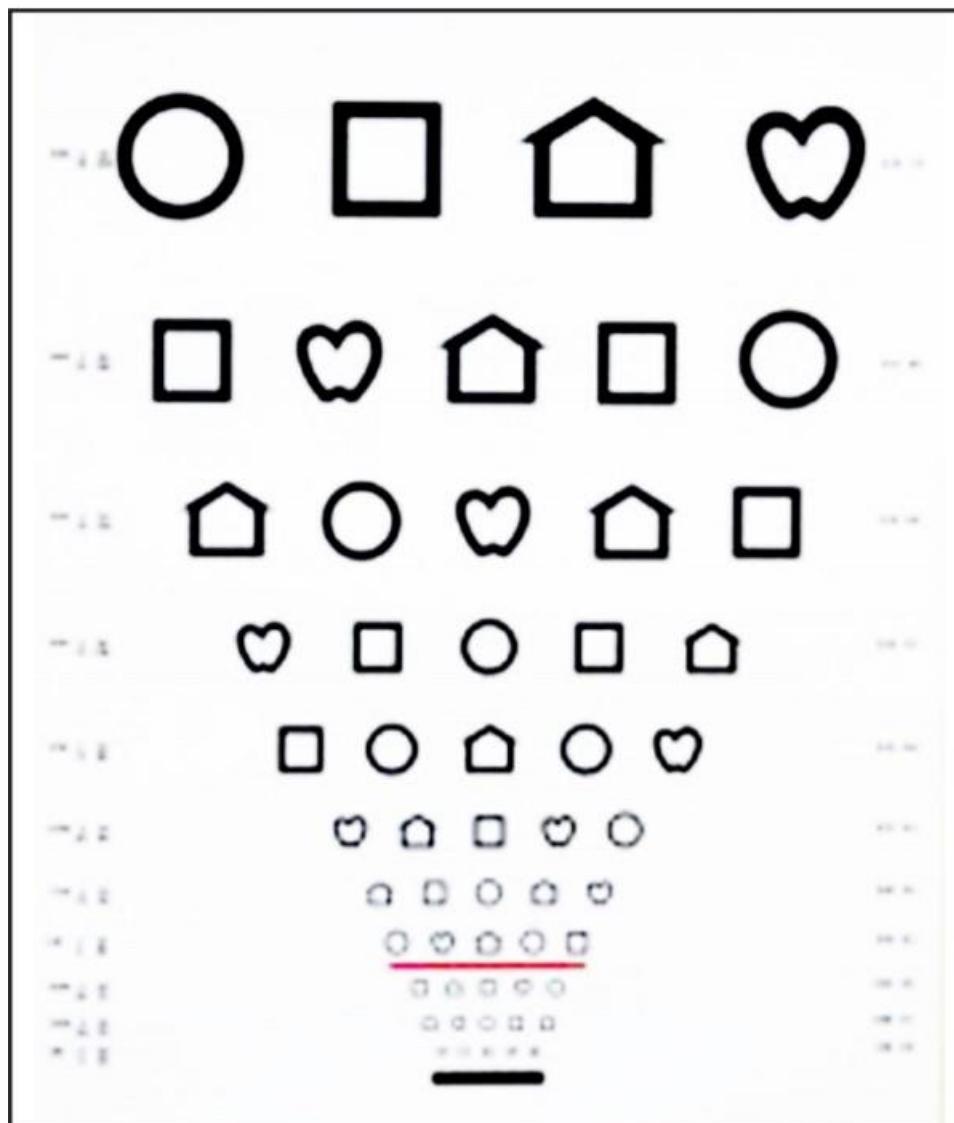

VA 20/30 is the best

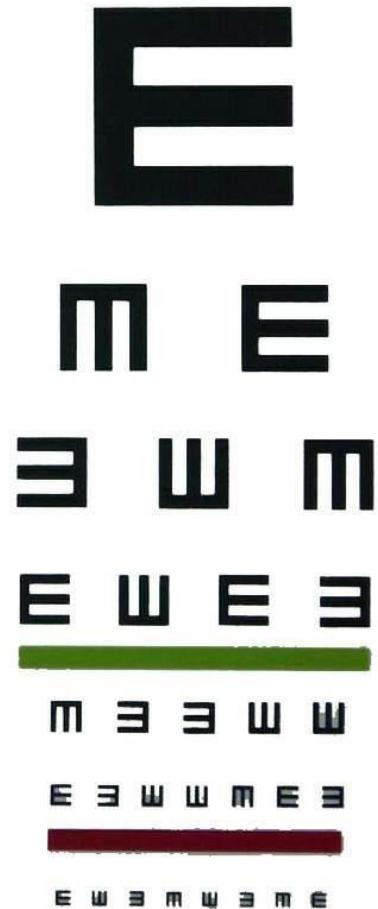

At 20 ft → VA 20/30

At 7 ft → VA 7/30

LEA chart

E-symbol

DISTANCE

Terminology

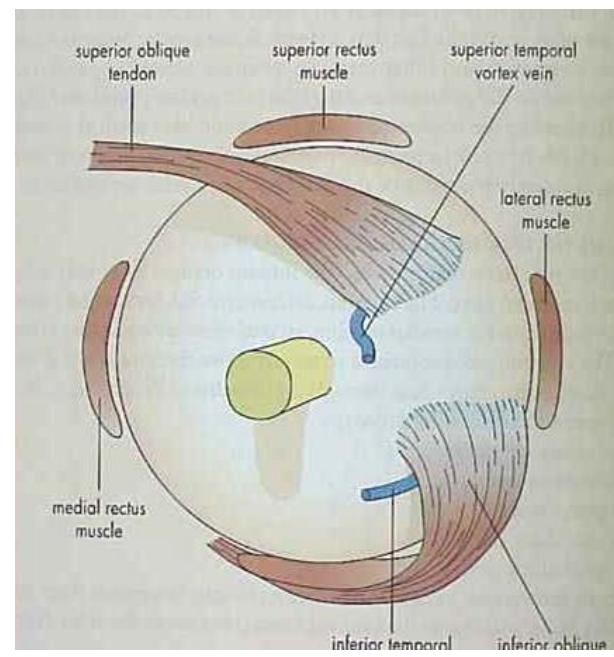

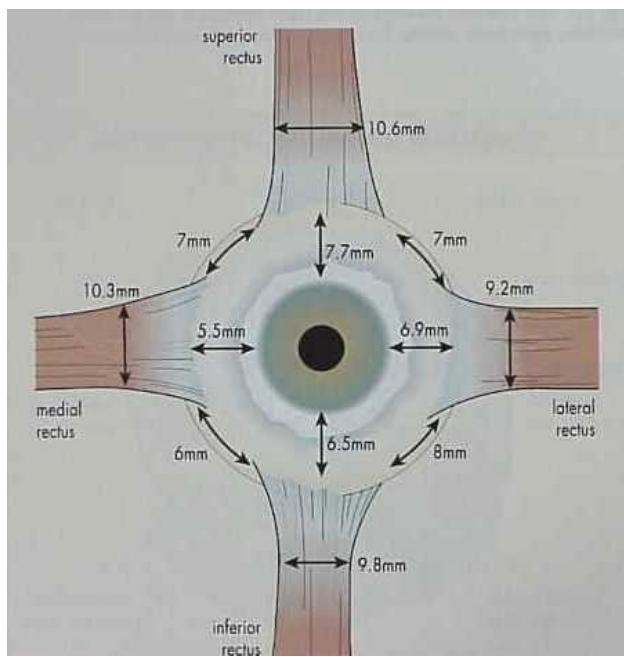

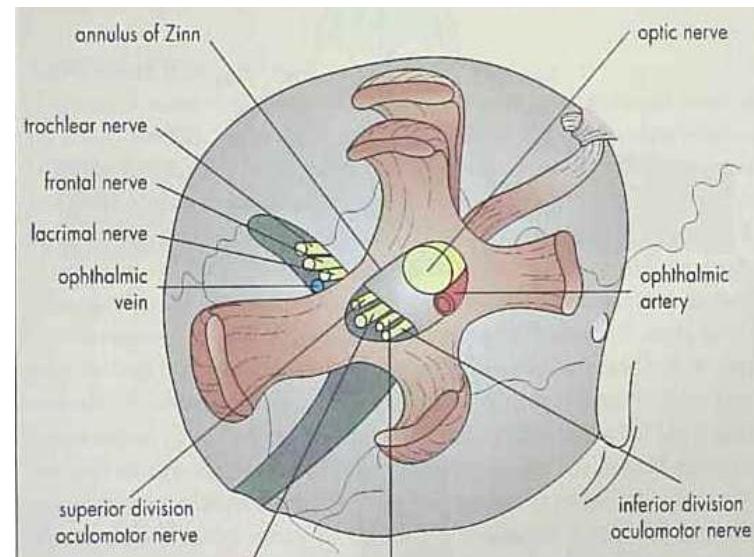

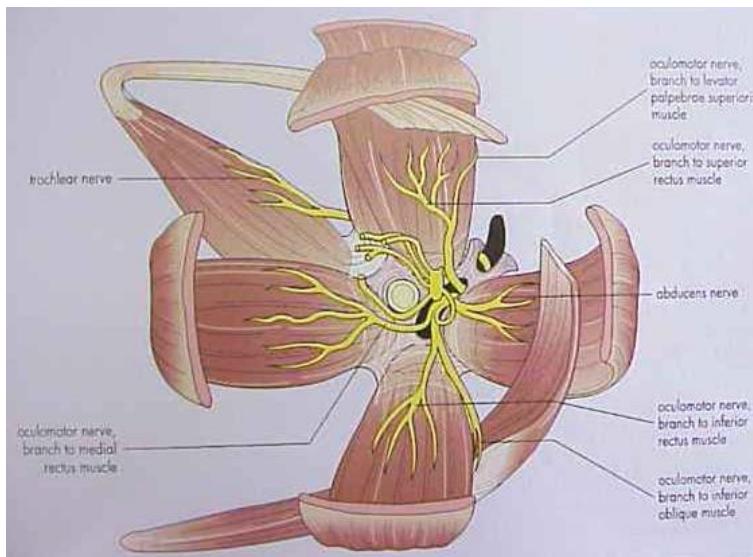

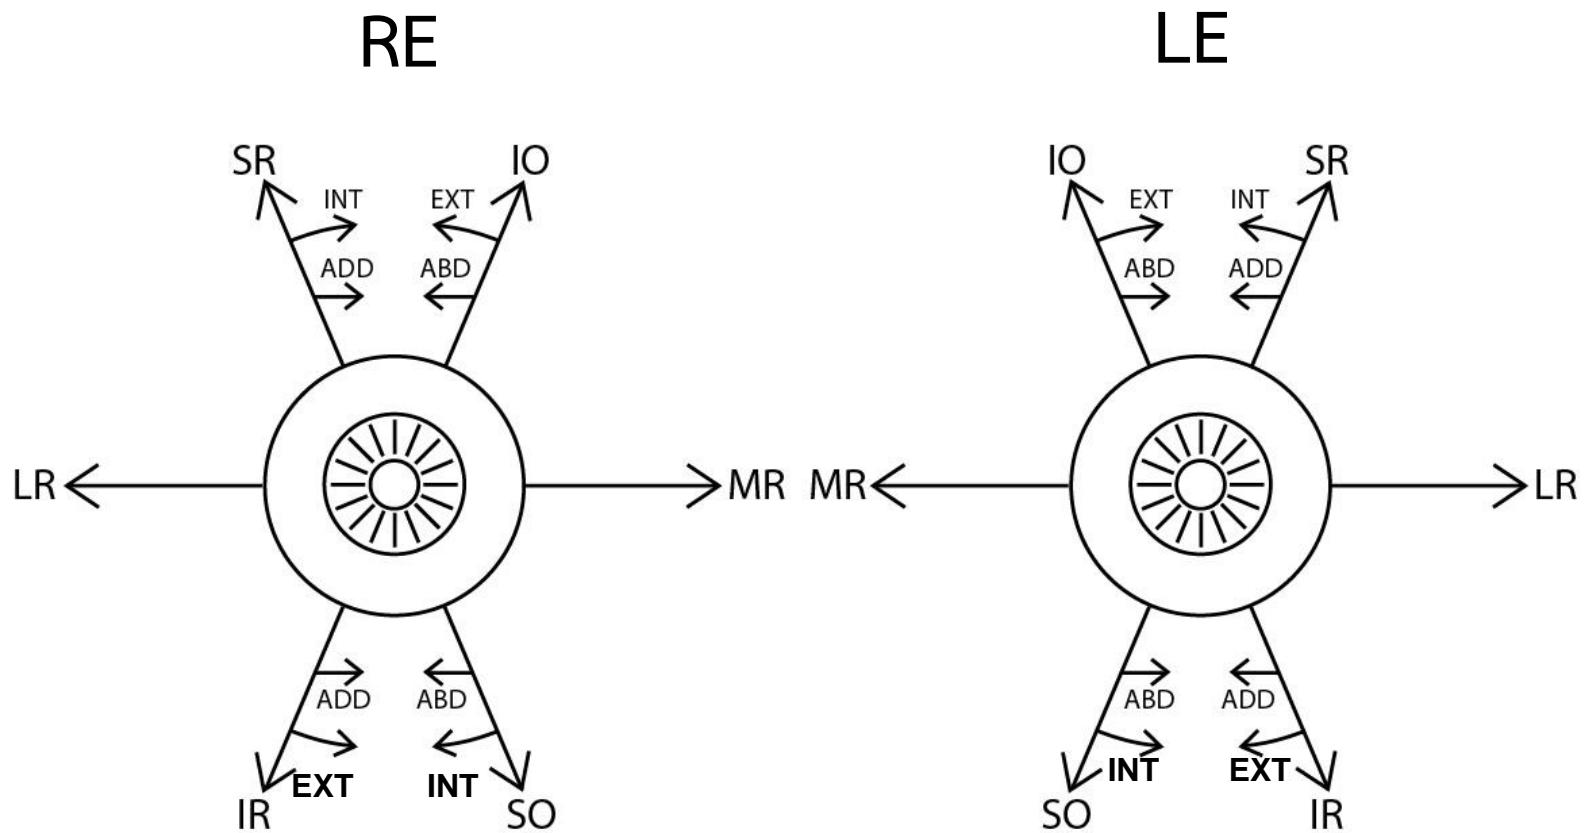

- strabismus*
- squint*
- crossed eye (eso)
- walled eye (exo)
- lazy eye **?
- ตาเข'
- ตาเหล'
- ตาเอก
- ตาสอน
- ตาเลือ'
- ตาเช' ๆ

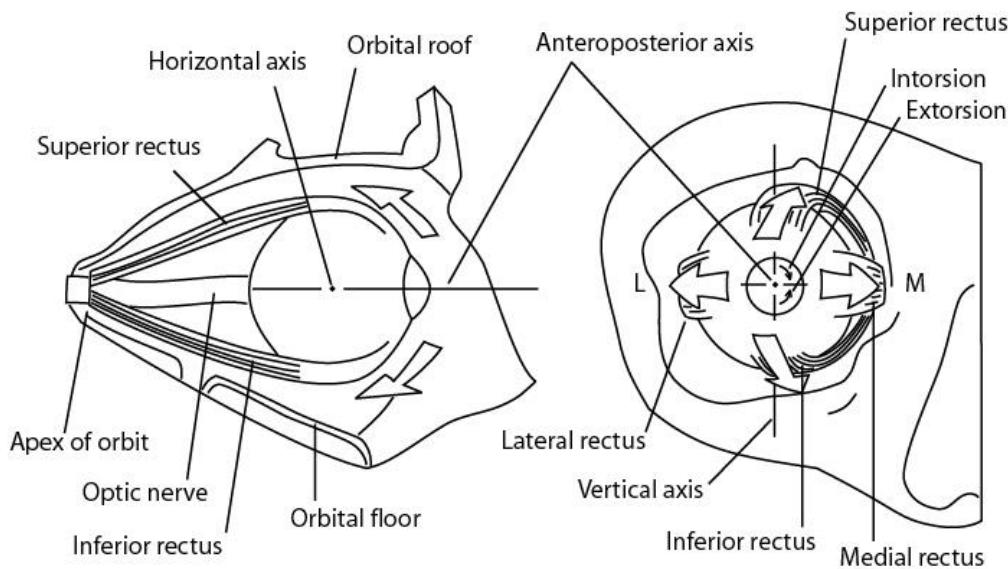

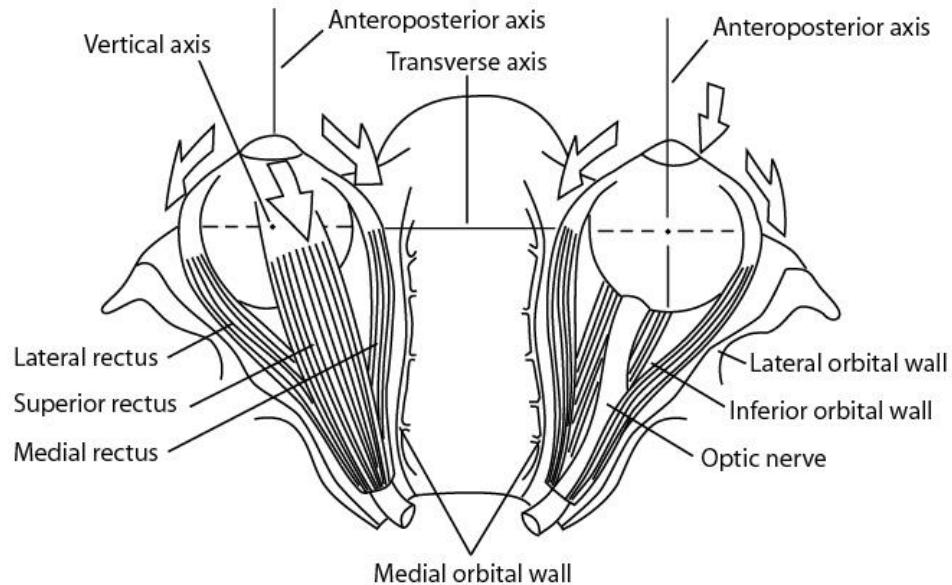

ตาเขหลอก pseudotrabismus
(pseudoesotropia)

ข้าวฟ่าง 2562

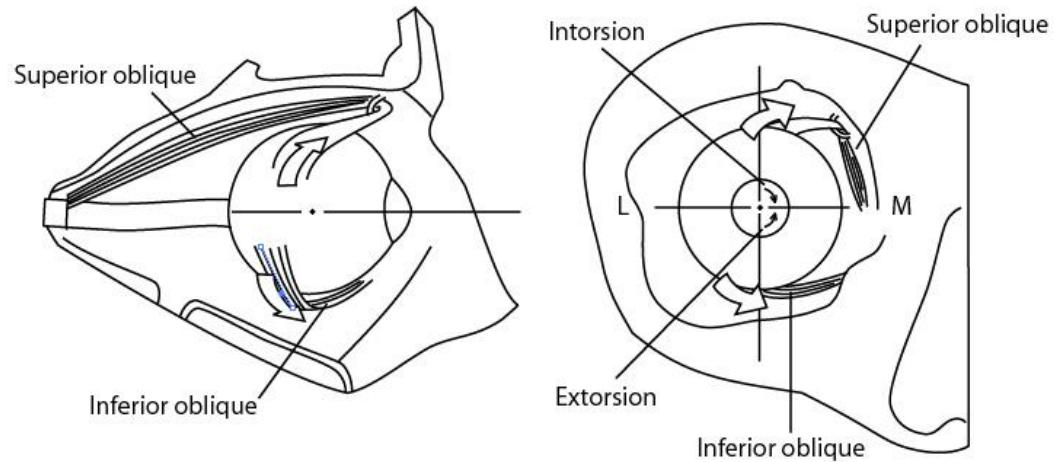

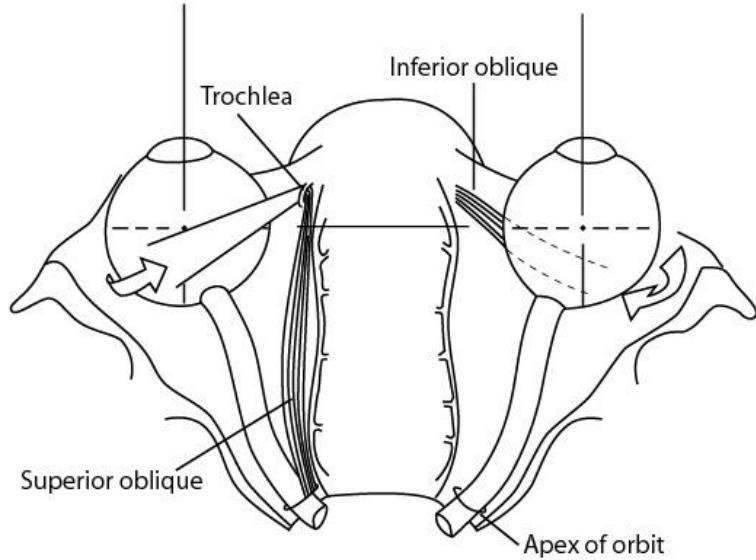

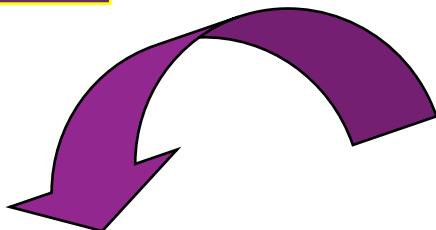

Reassure and follow 6-12 mo.

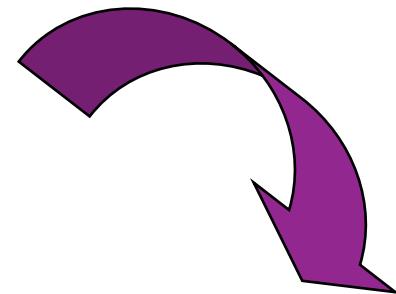

DUCTION

sursumduction

excycloduction

incycloduction

abduction

OD

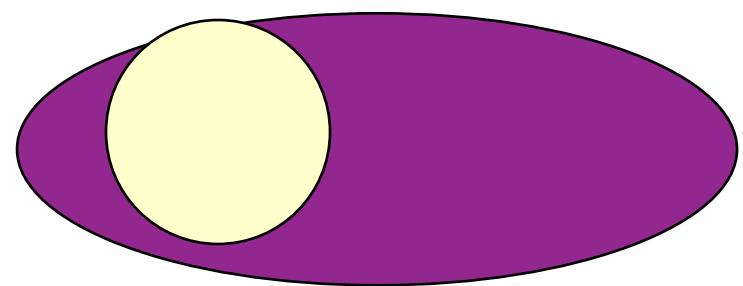

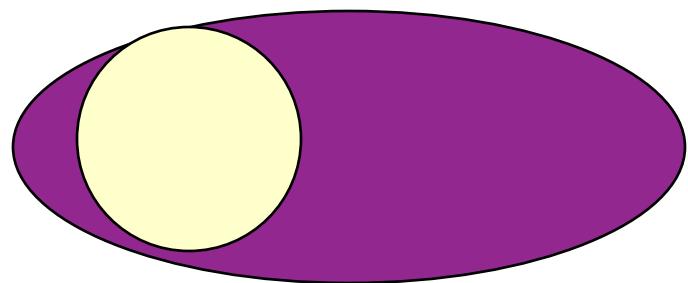

adduction

deorsumduction

Version

- binocular eye movement
 - levoversion
 - dextroversion
 - sursumversion
 - deorsumversion
 - incycloversion
 - excycloversion

DEXTROVERSION

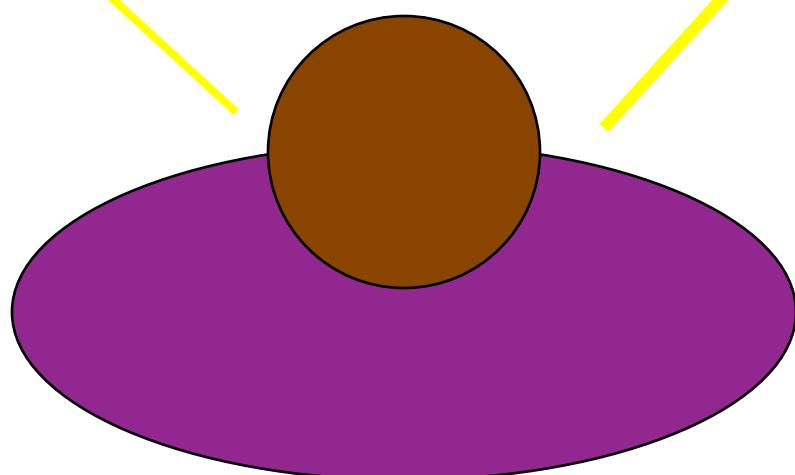

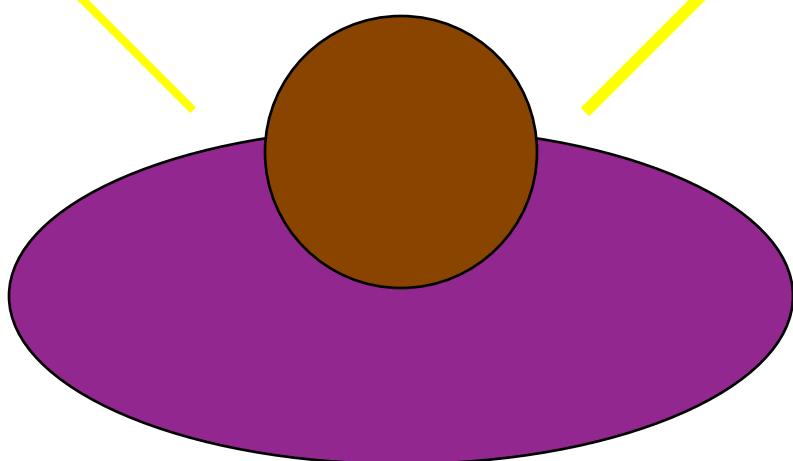

YOKE MUSCLES : RLR & LMR

SR

IO

IO

SR

OD

OS

YOKE MUSCLES

Strabismus classification

- *direction*: eso-, exo-, hyper-, hypo-
- *fusion ability* : heterophoria, heterotropia
- *age of onset* : congenital (infantile),
acquired-
- *comitancy*: comitant, incomitant
- etc...

Tests

- motor
- sensory

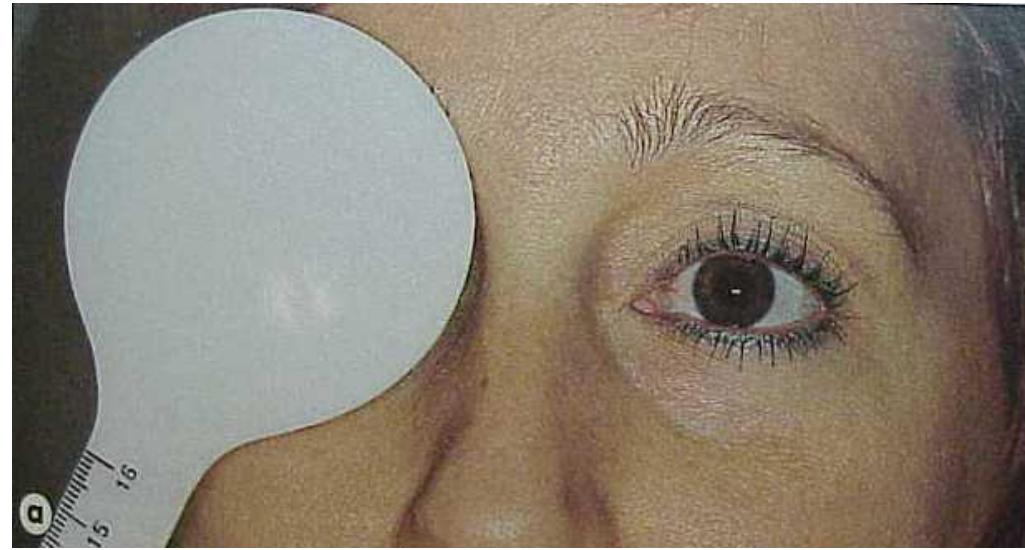

Cover test

cover-uncover :

detects (hetero)tropia

alternate cover test :

detects (hetero)phoria

OPD card

- Cover-uncover test:
 - Right/left eso/exotropia RET
 - Alternate eso/exotropia AXT
 - Orthotropia
- Alternate cover test
 - Esophoria E
 - Orthophoria

Hirschberg test

- Torch (penlight)
- Target
- Observe corneal light reflex OU

Hirschberg test

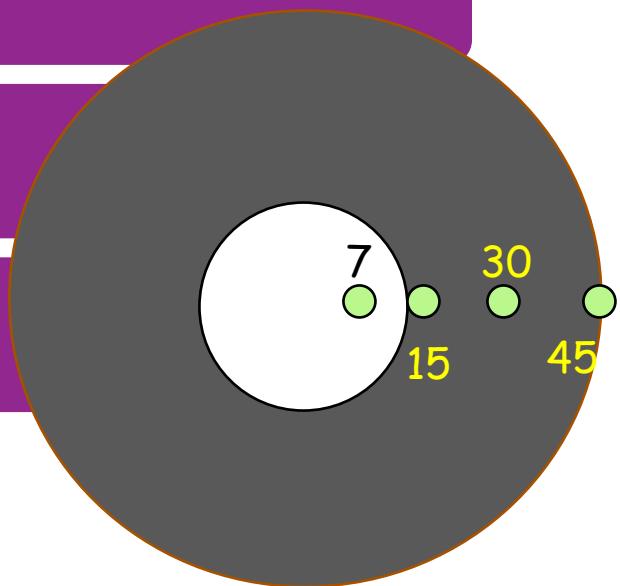

refer to pupil and limbus

between center and pupil margin : 7 deg

pupil margin : 15 deg

Mid-iris : 30 deg

limbus : 45 deg

Right hypotropia

Left hypertropia

Left sensory esotropia (LET)

RXT

Right hypertropia (RHT)

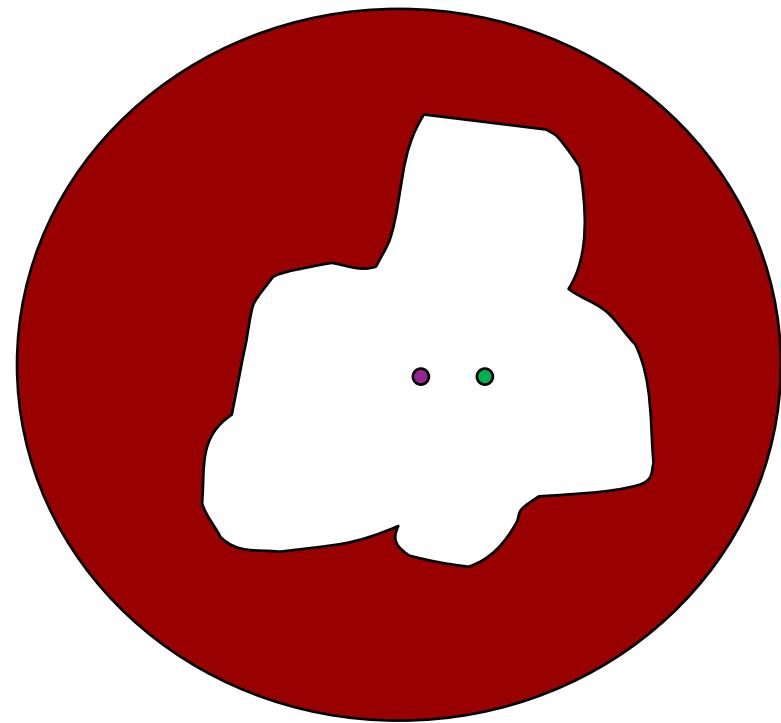

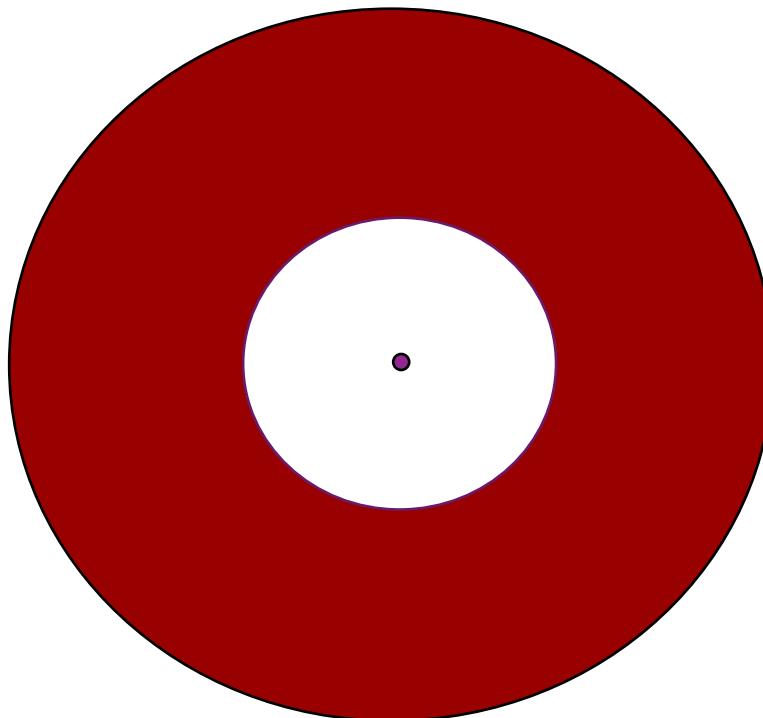

Right hypotropia (RHoT)

Hirschberg test

if pupil distorted, dilated, with posterior synechiae

decentration ? mm

1 mm ...7 degrees

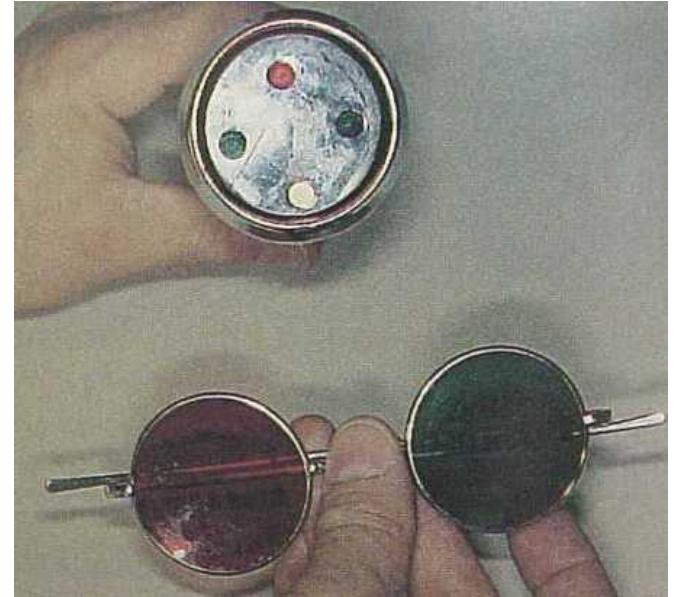

Alternate prism and cover test

- prism measurement of the deviation angle
- prism diopter (PD)
- 1 degree ~ 2 PD Δ

Sensory test

- Worth-four dot test
 - fusion (see 4)
 - suppression of OS,OD or alternate suppression (see 2 or 3)
 - diplopia (see 5)

Sensory test

Titmus stereopsis test

Common strabismus conditions (SDL)

- Infantile esotropia
- Accommodative esotropia
- Intermittent exotropia
- Sensory strabismus
 - esotropia
 - exotropia

Common strabismus conditions (SDL)

- Paralytic strabismus
 - CN 3,4,6 palsies
- Restrictive strabismus
 - thyroid-related orbitopathy
 - blowout fracture

Infantile esotropia (SDL)

- onset before 6 months of age
- angle of deviation > 30 PD
- refractive error : normal with age
- amblyopia 40-50%
- treatment : surgery before 2 years of age

?

Occlusion therapy for right amblyopia
The earlier treatment, the better outcome

Accommodative esotropia (SDL)

- 2 types
 - refractive accommodative
 - high hyperopia
 - nonrefractive accommodative
 - high AC/A ratio
- treatment
 - hyperopic spectacle correction
 - bifocal spectacle correction

LET

(refractive accommodative ET)

(+6.00 diopters OU)

Orthotropia

(full hyperopic correction)

Nonrefractive accommodative ET; (high AC/A)

AT DISTANCE ตาตรง

AT NEAR เขเข้า

BIFOCAL SPECTACLE CORRECTION

Intermittent exotropia (SDL)

ORTHOTROPIA

ตาตรงคือไม่มี tropia

LEFT EXOTROPIA

Paralytic strabismus (SDL)

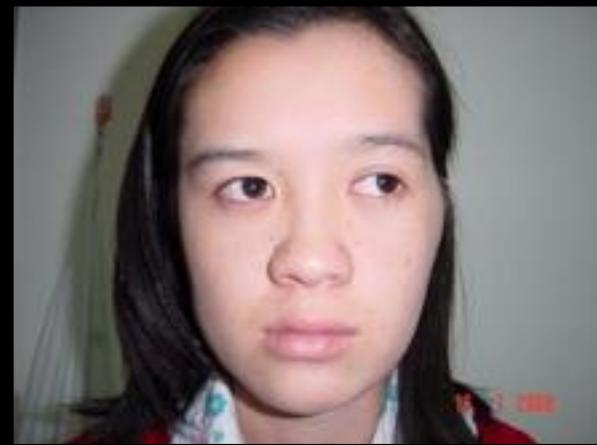

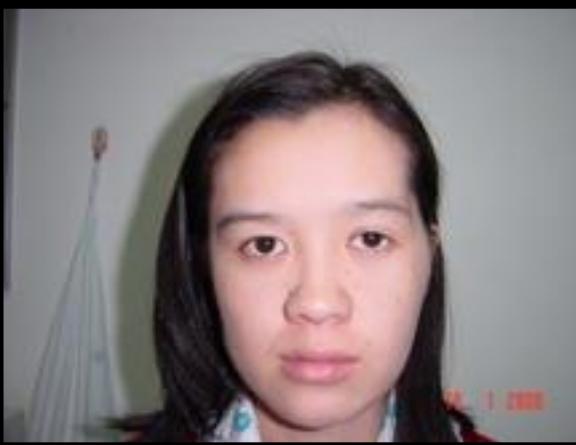

- CN6
 - esotropia
- CN4
 - hypertropia
- CN3
 - exotropia + hypotropia

หางสาเหตุ

Third nerve palsy

Trochlear palsy

Abducens palsy

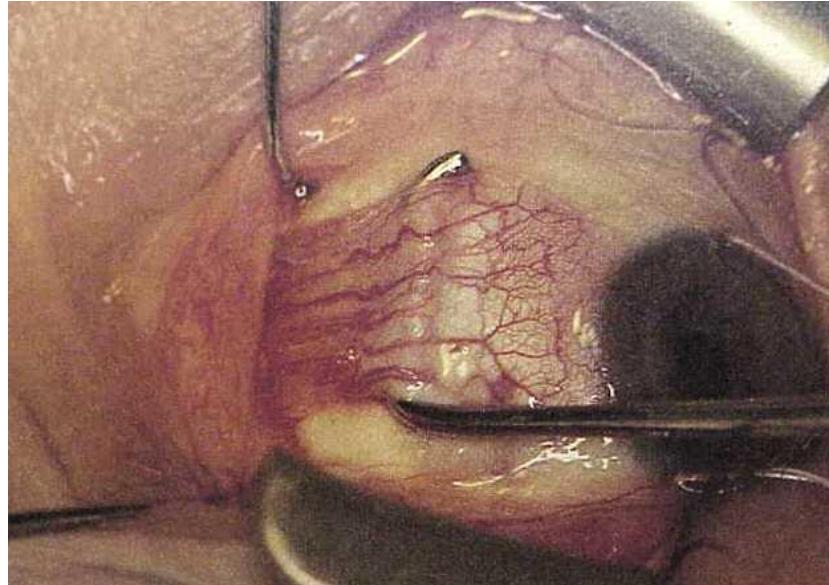

When to treat

- all children with strabismus
 - to prevent amblyopia
 - to improve single binocular vision
- strabismus in adults with symptoms

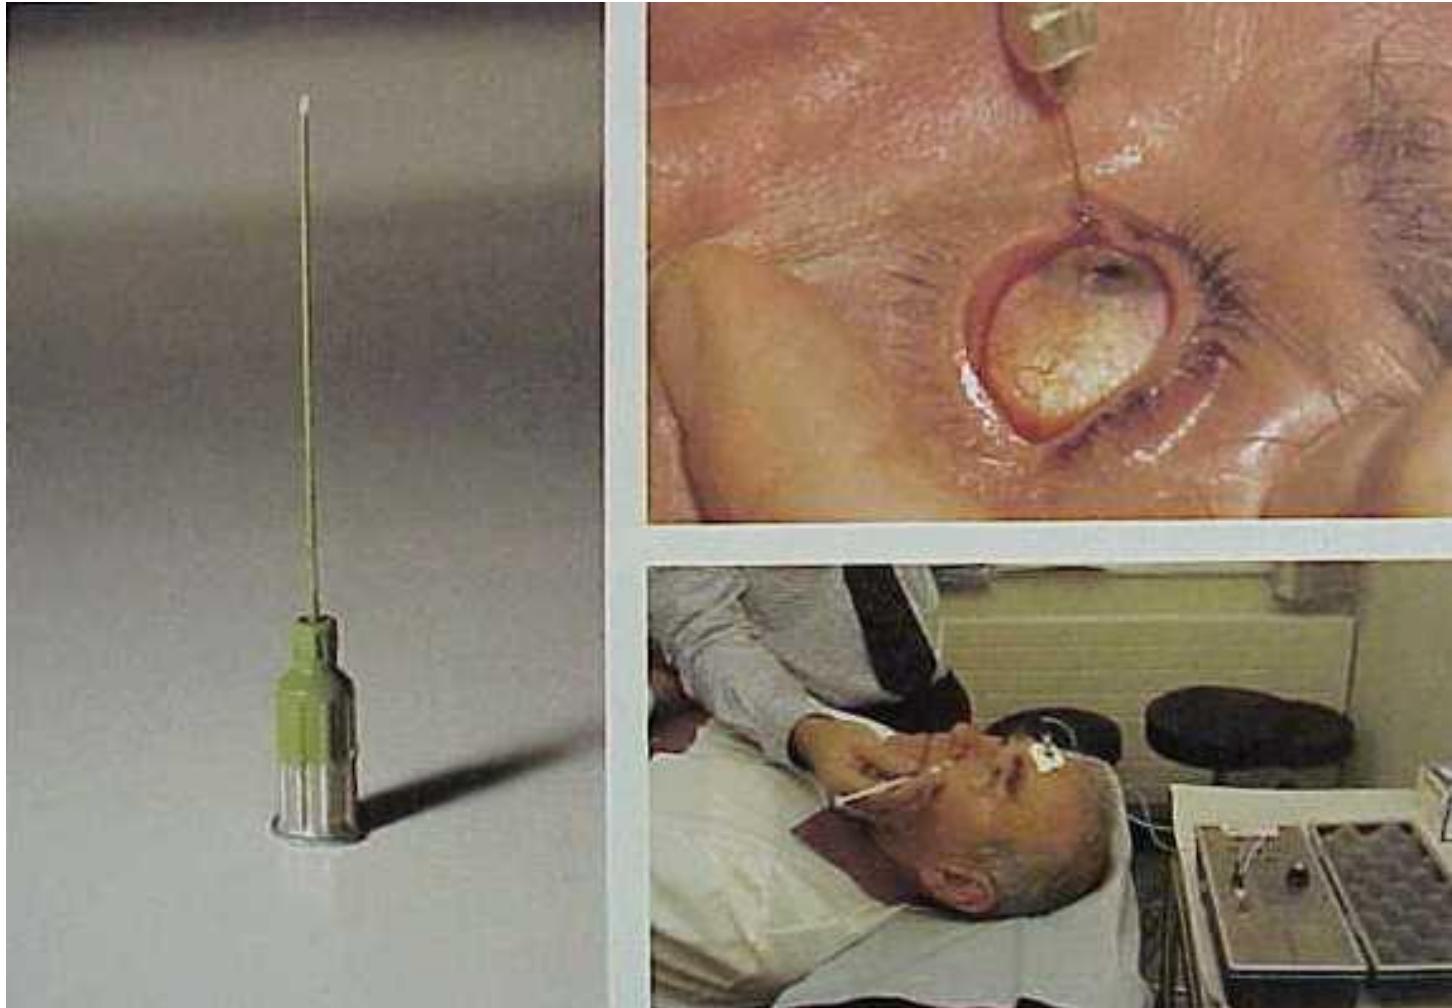

How to treat?

- Spectacles
- Patching (for kids with amblyopia)
- Surgery

Weakening -- *recession*

Strengthening -- resection

Botulinum (Botox) injection

Amblyopia

Features

- = **decreased vision** in an eye that otherwise typically appears normal
- usually unilateral
- may be bilateral (iatrogenic, uncorrected high bilat. refractive error)
- incidence : 2-4 % (2-5%, Taylor) in general population
- The leading cause of monocular visual loss in 20-70 yo age group

Features

- never develop de novo after the age of
6-7 years

(Tychsen,2002)

Features

- if previously amblyopic -- can return up to 10 years
- the younger at onset, the quicker and deeper it will develop
- the younger at onset, the more rapidly it can be reversed with treatment

Amblyopia (Lazy eye)

- Unilateral / bilateral
- Etiology
 - Strabismus **
 - High refractive error (iso-ametropia)
 - Anisometropia
 - Deprivation
- Treatment
 - Patch (the better eye)
 - Glasses
 - Correction of causes

VDO
